

SUCCESS STORY

INDUSTRY – FOOD & BEV MANUFACTURING

APPLICATION – ENZYME GENERATION

REDUCED DOWNTIME

ESTIMATED COST SAVINGS

\$11,000

Dichtomatik Works with Food Manufacturer to Reduce Lead Times and Provide Cost Savings.

Challenge

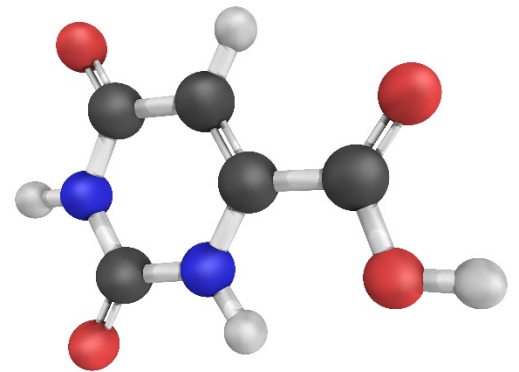

Novozymes, a top enzyme manufacturer, needed a quick and cost-effective solution that would reduce production downtime while providing costs savings.

Long lead times from the OEM waiting for replacement parts left them without a way to keep production moving efficiently; resulting in increased downtime and loss of revenue.

Solution

The initial project was brought to Will Hunt and the crew at the Raleigh, NC branch who then recruited the inventory and product experts at Dichtomatik. The first step was to conduct a detailed analysis of application and usage requirements. From this study, Dichtomatik provided Motion Industries with a custom molded silicone seal quickly to get machines back up and running.

Motion provides Novozymes proper inventory management by having replacement parts readily available, maximizing production. Cost savings. Yes, you can check that box as well. With the help of Dichtomatik, Motion Industries was able to provide their customer with increased production uptime, cost savings, and a quality seal.

Contact Dichtomatik today to work with you and provide your end-users with solutions that tackle any challenge.
