Quick Delivery Saves Downtime at Major Beef Producer

**Challenge**

A major beef producer was down for repairs and upon opening a screw conveyor noticed that the screw was severely worn and the liners needed to be replaced. The replacement components were not on hand for the shutdown. The repairs had to be made or there was risk of catastrophic failure and serious downtime.

**Solution**

Motion Industries and KWS are strategic partners and able to handle almost any difficult application and lead time. Standard lead time was 14 working days but KWS shipped the replacement screw and liners within 2 working days. Installation of the new components was made during the same scheduled shutdown so no time was lost.

---

**Thank you for the quick response on everything! You guys understand how important it is to take care of our customers. KWS is a true partner to Motion Industries!**
