

CASE STUDY

Industry

Oil & Gas

Application

Transfer pumps at natural gas pumping stations

Original Drive Description

7/5V2240 belts

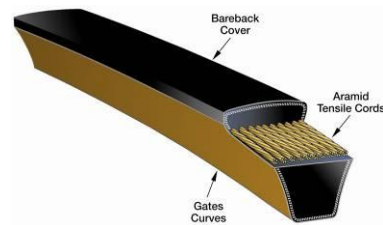

Problem

The customer was required to reduce pump maintenance costs. Because the station was responsible for over fifty sites, this was a daunting task.

Solution Drive Description

Predator[®] belt drive
Belt-5/5VP2240

Benefits of Gates Drive

Both the replacement frequency and component costs for a 5-strand Predator reduced overall costs for on site maintenance. The customer plans to continue to convert to Gates drives throughout all of their facilities.
